

Ricky Miller

Ottawa, Ontario, Canada

hello@ricky.codes • ricky.codes • github.com/rickycodes

Senior Software Engineer

Senior software engineer with 15+ years building web and mobile products, shared platforms, and developer infrastructure. Product engineering, architecture, release engineering, developer productivity. Strongest work: complex systems, difficult bugs, better engineering flow.

Core Technologies

Languages: JavaScript, TypeScript, Rust, Python, Bash, PHP

Frameworks: React, React Native, Node.js, HapiJS

Engineering: GitHub Actions, CI/CD, release engineering, test automation, Linux, Docker, REST APIs

Professional Experience

Senior Software Engineer

Nov 2019 – Oct 2024

MetaMask

Built MetaMask Mobile, Extension, Core, shared libraries, and engineering infrastructure for major cryptocurrency wallet.

- Authored **447 pull requests** across **21 repositories**; merged **376** across products, shared libraries, and infrastructure.
- Delivered **EIP-1559 transaction support**: controller logic, gas estimation, typed transactions, speed-up/cancellation flows, tests, MetaMask Mobile integration.
- Shipped Mobile and Extension features across wallet state, transactions, networking, onboarding, browser compatibility, and platform behavior.
- Modernized delivery systems with GitHub Actions, release automation, npm publishing, monorepo tooling, and reusable cross-repository workflows.
- Led framework and dependency upgrades, including MetaMask Extension's React 16 migration; preserved stability and test coverage.
- Worked across Mobile, Extension, Core, QA, Security, Product, and Infrastructure in security-sensitive systems.

Selected technologies: JavaScript, TypeScript, React Native, React, Node.js, GitHub Actions, Ethereum

Senior Developer

Nov 2018 – Nov 2019

:Resolver

Built enterprise governance, risk, compliance, and incident-management software.

- Shipped full-stack features across React applications and HapiJS services.
- Designed REST APIs, database migrations, and customer-facing workflows.
- Improved test automation, developer tooling, and application reliability.

Professional Experience continued

Senior Developer

Jul 2015 – Apr 2018

NowSecure

Built enterprise software for Android and iOS security analysis.

- Built React applications for enterprise customers and security researchers.
- Integrated client applications with backend security-analysis services.
- Improved reusable UI architecture and engineering workflows.

Senior Developer

Sep 2014 – Jul 2015

OneMethod

Built digital products and interactive web applications for enterprise clients.

- Built reusable AngularJS and Backbone applications.
- Introduced Selenium browser testing; reduced regressions and improved release confidence.

Developer @ MetaLab

Apr 2014 – Sep 2014

Built production e-commerce features for Walmart Canada with JavaScript and Node.js.

Developer @ High Road Communications

Nov 2010 – Jul 2013

Built web applications, API integrations, and interactive marketing platforms for enterprise clients.

Selected Projects

Oysterclip (Rust)

Privacy-focused clipboard manager. Local text and image history. Native desktop interface.

Retrorecord (Rust)

Rust reimplementation of Raspberry Pi gameplay recorder. Systems programming, performance, hardware integration.

Open Source

Contributor to Hyper, Beaker Browser, stdweb, winamp2-js, and other open-source web, Rust, and developer-tooling projects.

Community

Co-founder @ Toronto NodeSchool

Co-founded Toronto NodeSchool. Organized JavaScript workshops. Mentored developers entering Node.js ecosystem.
